Amendments to Claims

Please amend the claims as follows:

- 1. (cancelled)
- 2. (cancelled)
- 3. (cancelled)
- 4. (cancelled)
- 5. (cancelled)
- 6. (cancelled)
- 7. (cancelled)
- 8. (currently amended) A method for minimizing corrosion of metal devices used for assembling pretreated wood constructions, comprising capping the ends of a plurality of wood joists with a membrane barrier and connecting said capped ends to a rim wood joist at a surface of which is covered by a strip of membrane barrier, each of said wood joists and rim wood joists being pretreated with a preservative selected from the group consisting of alkaline copper quat, ammoniacal copper quat, and copper azole; said membrane barrier comprising a carrier support layer and, attached to said carrier support layer, a preformed pressure-sensitive waterproofing adhesive layer operative to seal around metal fasteners driven through said membrane barrier; and

connecting said <u>capped ends and said rim wood</u> joists together by fastening them to metal joist hangers using metal fasteners, said <u>fasteners metal hangers</u> being separated from said wood joists <u>and said rim wood joists</u> by said membrane barriers, <u>in order to prevent contact between said pretreated joists and said metal hangers said membrane barriers</u> operative to seal around metal fasteners driven into the wood through said membrane barriers.

9. (previously presented) The method of claim 8 further comprising applying a membrane barrier to the uppermost surfaces of said wood joist and wood rim joist.

- 10. (previously presented) The method of claim 8 wherein said membrane barrier is non-water-absorptive.
 - 11. (cancelled)
 - 12. (cancelled)
 - 13. (cancelled)
- 14. (previously presented) The method of claim 8 wherein said metal device and metal fasteners are made of galvanized steel.
